

Alexandra – RAG OCR Test Document

Alexandra is 38 years old and is passionate about technology and artificial intelligence. She enjoys working with modern development frameworks and tools, particularly those related to machine learning and natural language processing. Alexandra is currently exploring local RAG (Retrieval-Augmented Generation) systems using Ollama, which allows her to run language models locally without relying on external APIs. She is learning about text chunking, embeddings, and vector databases to build her own AI-powered applications. Alexandra values privacy and the ability to work with AI models on her own infrastructure. Her interests include Python programming, data processing, and building practical applications that combine web scraping, data ingestion, and intelligent search capabilities.
